SECURITIES AND EXCHANGE COMMISSION
Washington, DC 20549

FORM 8-K

CURRENT REPORT
Pursuant to Section 13 or 15(d)
of the Securities Exchange Act of 1934

Date of Report (Date of earliest event reported): April 19, 2023

Cognition Therapeutics, Inc.
(Exact name of registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

001-40886
(Primary Standard Industrial
Classification Code Number)

13-4365359
(I.R.S. Employer
Identification No.)

2500 Westchester Ave.
Purchase, NY
(Address of principal executive offices)

10577
(Zip Code)

Registrant's telephone number, including area code: (412) 481-2210

Not Applicable
(Former name or former address, if changed since last report)

Check the appropriate box below if the Form 8-K filing is intended to simultaneously satisfy the filing obligation of the registrant under any of the following provisions (see General Instruction A.2. below):

- ☐ Written communications pursuant to Rule 425 under the Securities Act (17 CFR 230.425)
- ☐ Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)
- ☐ Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))
- ☐ Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Trading Symbol	Name of Exchange on Which Registered
Common Stock, par value \$0.001 per share	CGTX	The Nasdaq Stock Market LLC

Indicate by check mark whether the registrant is an emerging growth company as defined in Rule 405 of the Securities Act of 1933 (§230.405 of this chapter) or Rule 12b-2 of the Securities Exchange Act of 1934 (§240.12b-2 of this chapter).

Emerging growth company ☒

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Item 7.01 Regulation FD Disclosure.

Attached as Exhibit 99.1 and furnished for purposes of Regulation FD is a presentation that Cognition Therapeutics, Inc. may use from time to time in presentations or discussions with investors, analysts, and other parties.

The information in this Item 7.01 (including Exhibit 99.1) is being furnished solely to satisfy the requirements of Regulation FD and shall not be deemed to be “filed” for the purposes of Section 18 of the Securities Exchange Act of 1934, as amended (the “Exchange Act”), or otherwise subject to the liabilities of that Section, nor shall it be deemed to be incorporated by reference in any filing under the Securities Act of 1933, as amended, or the Exchange Act.

Item 9.01 Financial Statements and Exhibits.

(d) Exhibits

The following exhibits are being furnished herewith:

Exhibit No.	Document
99.1	Investor presentation of Cognition Therapeutics, Inc.
104	Cover Page Interactive Data File (embedded within the Inline XBRL document).

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

Forward-looking Statements

FORWARD-LOOKING STATEMENTS

This presentation contains forward-looking statements within the meaning of The Private Securities Litigation Reform Act of 1995. All statements contained in this presentation, other than statements of historical facts, are forward-looking statements. These statements involve known and unknown risks, uncertainties and other important factors that may cause our actual results, performance, or achievements to be materially different from any future results, performance, or achievements expressed or implied by the forward-looking statements. In some cases, you can identify forward-looking statements by terms such as "may," "might," "will," "should," "expect," "plan," "aim," "seek," "are," "could," "intend," "target," "project," "contemplate," "believe," "estimate," "predict," "forecast," "potential" or "continue" or the negative of these terms or other similar expressions. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends that we believe may affect our business, financial condition, and results of operations. These forward-looking statements speak only as of the date of this presentation and are subject to a number of risks, uncertainties and assumptions, some of which cannot be predicted or quantified and some of which are beyond our control. Factors that could cause actual results to differ materially from current expectations include, but are not limited to: competition; our ability to secure new (and retain existing) grant funding; our ability to grow and manage growth, maintain relationships with suppliers and retain our management and key employees; our ability to successfully advance our current and future product candidates through development activities, preclinical studies and clinical trials; costs related thereto; the timing, scope and likelihood of regulatory filings and approvals, including regulatory approval of our product candidates; changes in applicable laws or regulations; the possibility that the we may be adversely affected by other economic, business or competitive factors; our estimates of expenses and profitability; the evolution of the markets in which we compete; our ability to implement our strategic initiatives and to innovate our existing products; our ability to defend our intellectual property; the impact of the COVID-19 pandemic on our business, supply chain and labor force; and the risks and uncertainties described in the "Risk Factors" section of our annual and quarterly reports filed with the SEC that are available on www.sec.gov. You should not rely on these forward-looking statements as predictions of future events. The events and circumstances reflected in our forward-looking statements may not be achieved or occur, and actual results could differ materially from those projected in the forward-looking statements. Moreover, we operate in a dynamic industry and economy. New risk factors and uncertainties may emerge from time to time, and it is not possible for management to predict all risk factors and uncertainties that we may face. Except as required by applicable law, we do not plan to publicly update or revise any forward-looking statements contained herein, whether as a result of any new information, future events, changed circumstances or otherwise.

TRADEMARKS

This presentation may contain trademarks, service marks, trade names and copyrights of other companies, which are the property of their respective owners. Solely for convenience, some of the trademarks, service marks, trade names and copyrights referred to in this presentation may be listed without the TM, SM or ® symbols, but we will assert, to the fullest extent under applicable law, the rights of the applicable owners, if any, to the trademarks, service marks, trade names and copyrights.

MARKET & INDUSTRY DATA

Projections, estimates, industry data and information contained in this presentation, including the size of and growth in key end markets, are based on information from third-party sources and management estimates. While we believe that these third-party sources are reliable, we cannot guarantee the accuracy or completeness of these sources. Our management's estimates are derived from third-party sources, publicly available information, knowledge of our industry and assumptions based on such information and knowledge. Our management's estimates have not been verified by any independent source. All of the projections, estimates, market data and industry information used in this presentation involve a number of assumptions and limitations, and you are cautioned not to give undue weight to such information. In addition, projections, estimates and assumptions about our and our industry's future performance are necessarily subject to a high degree of uncertainty and risk due to a variety of factors, including, but not limited to, those described above, that could cause future performance to differ materially from our expressed projections, estimates and assumptions or those provided by third parties.

Abstract: There is a large unmet medical need to develop disease-modifying treatment options for individuals with age-related degenerative diseases of the central nervous system. The sigma-2 receptor (S2R), encoded by *TMEM97*, is expressed in brain and retinal cells, and regulates cell functions via its co-receptor progesterone receptor membrane component 1 (PGRMC1), and through other protein–protein interactions. Studies describing functions of S2R involve the manipulation of expression or pharmacological modulation using exogenous small-molecule ligands. These studies demonstrate that S2R modulates key pathways involved in age-related diseases including autophagy, trafficking, oxidative stress, and amyloid- β and α -synuclein toxicity. Furthermore, S2R modulation can ameliorate functional deficits in cell-based and animal models of disease. This review summarizes the current evidence-based understanding of S2R biology and function, and its potential as a therapeutic target for age-related degenerative diseases of the central nervous system, including Alzheimer's disease, α -synucleinopathies, and dry age-related macular degeneration.

Unique Protective Effect: A673T-APP Mutation Supports CT1812 Mechanism

- First variant associated with protection against Alzheimer's disease¹ – 'Icelandic Mutation'
- Mutant A β oligomers bind with *four-fold lower affinity* to neuronal synapses than WT protein
- Carriers are *four times less likely* to get Alzheimer's disease than non-carriers²
- To our knowledge, CT1812 is the only drug that mimics the protective effects of this mutation

Key Takeaways from 2022 Presentations

- Strong correlations of canonical AD biomarkers from clinically validated assays confirms proteomics method as a quantitative way of assessing the impact of CT1812
 - SHINE-A and SPARC CSF AD biomarkers at baseline were similar to that of the AD group from an independent, well-characterized AD and control cohort
- Network and pathway analyses corroborate the mechanism of action of CT1812 in regulating synapses and amyloid biology
- CT1812 normalizes several key proteins dysregulated in or genetically linked to AD

Rationale for σ -2 Modulators in Dry AMD

Goal: Protect RPE Cells From Disease-relevant Stressors

σ -2 receptors

- **Expression:** in RPE cells, retinal ganglion cells, photoreceptors in retina
- **Biology:** Regulates autophagy, protein trafficking, lipid metabolism dysregulated in AMD
- **Target validation:** TMEM97 knockdown is protective
- **Human genetics:** Linked to dry AMD

σ -2 receptor modulators

- **Non-invasive oral small molecule approach to reach retina**
- **Clinical biomarker support:** Proteomics analyses showed differential movement of proteins involved in dry AMD
- **Preclinical data:** regulates cell survival and inflammatory pathways, ameliorate trafficking deficits

Unbiased Pathway Analysis of Patient Clinical Trial Proteomics Data Supports Targeting σ -2 for dAMD

Proteomics datasets from two Phase 2 clinical trials

1. COG0102

Phase 2 trial of σ -2 receptor modulator, CT1812, or placebo in mild-to-moderate AD patients

Proteomics analysis of CSF at 28 d (N=15)

2. SHINE-A

Phase 2 trial of σ -2 receptor modulator, CT1812, or placebo in mild-to-moderate AD patients

Proteomics analysis of CSF at 6mo (N=18)

1. List of proteins differentially expressed in CSF from CT1812- vs. placebo-treated patients generated for each trial, timepoint
2. Metacore pathway analysis of CSF (CT1812 vs placebo) across trials conducted to ascertain which predesignated functional disease ontologies may be significantly affected

2022 Annual Meeting of the Association for Research in Vision and Ophthalmology (ARVO)

Sigma-2 receptor modulators rescue POS trafficking deficits in RPE cell-based models of dry AMD

Evi Malaguse¹, Eloise Keeling¹, Nicole Knezovich¹, Lora Wainwright¹, Emily Watto¹, Anthony O. Caggiano¹, Arjuna Ratnayaka¹, Mary E. Hamby¹
(A) Cognition Therapeutics Inc., Pittsburgh, PA, USA; (B) Clinical and Experimental Sciences, Faculty of Medicine, University of Southampton, Southampton, Hampshire, UK

INTRODUCTION

Age-related macular degeneration (AMD) is one of the leading causes of blindness. While treatments exist for wet AMD, there are no approved therapeutics for dry AMD (dAMD), which comprises 90% of all AMD cases. There are several hallmarks of dAMD including inflammation, oxidative stress, and the presence of amyloid-beta oligomers (A β O), which can disrupt key homeostatic functions of retinal pigment epithelium (RPE) cells, including the ability of RPE cells to phagocytose or recycle photoreceptor outer segments (POS). Scheme 1¹. The sigma-2 receptor (S2R), encoded by TMEM167, is a G-protein coupled receptor (GPCR) that confers a decreased risk of dAMD^{2,3} and down-regulation of TMEM167 expression protects RPE cells from oxidative stress⁴. The S2R modulator CT1812 is currently in Phase 2 clinical trials for Alzheimer's disease and dementia with Lewy bodies, although CT1812 is not yet approved for any indication. Preclinical assays from aged patients given CT1812 or placebo suggest S2R modulators regulate key proteins and pathways disrupted in dAMD^{5,6}. S2R modulators prevent A β O from binding to neurons (Scheme 2⁷) and rescue deficits in neuronal functioning⁸, but whether S2R modulators can limit injury from other sensors has not been investigated. Based on the role of the S2R as a key damage sensor and the link of S2R to dAMD, the hypothesis that S2R modulators could rescue A β O and oxidative stress-induced deficits was tested by measuring the ability of RPE cells to phagocytose / recycle POS (Scheme 1).

A β O bind to RPE cells in a concentration and time-dependent manner

A third chemically distinct S2R modulator rescues A β O and H₂O₂-induced deficits in POS trafficking

METHODS

Goal 1) To characterize A β O binding in RPE cells

Goal 2) To determine whether S2R modulators rescue A β O and H₂O₂-induced deficits in the ability of RPE cells to phagocytose POS

S2R modulators, including CT1812, rescue A β O-induced deficits in the homeostatic recycling of POS

S2R modulators, including CT1812, rescue H₂O₂-induced deficits in the homeostatic recycling of POS

CONCLUSIONS

- Oxidative stress and toxic A β O disrupt trafficking of photoreceptor outer segments (POS) in RPE cells
- S2R modulators, from three chemically distinct series, rescue oxidative stress and A β O-induced deficits in POS trafficking, normalizing a key homeostatic process disrupted in dAMD
- Results expand beyond the previously elaborated mechanism of action of CT1812 and suggest CT1812 may be protective against oxidative stress, as well as A β O toxicity in age-related degenerative diseases

See Cognition Therapeutics' Booth #3126 for Clinical Trial details

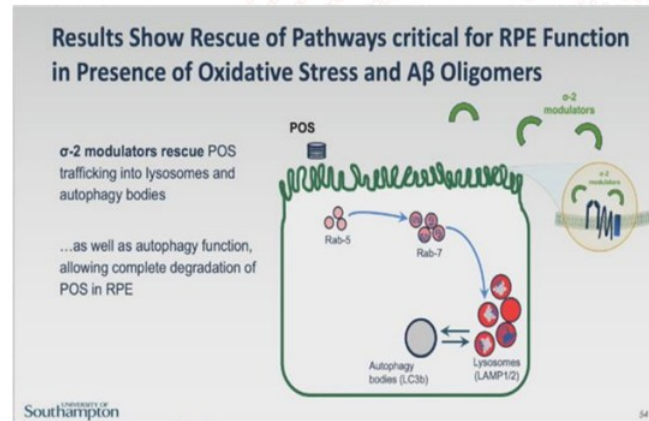

σ -2 Receptor Modulators Rescue RPE Lysosomal Trafficking Deficits

CT1812 rescues crucial function of RPE to traffic & degrade photoreceptor outer segments (POS) cargos following toxic insults

Dry AMD Endpoints: GA

- A fundus camera records images of the interior surface of the eye, providing visual detail of the retina, optic disc and macula
- Fundus photography is used to determine the presence of drusen and GA lesions
- In dry AMD, GA lesions are correlated with death of RPE cells and often precede noticeable vision loss

Dr. Arjuna Ratnayaka
University of Southampton
Clinical and Experimental Sciences

Lipofuscin, a byproduct of lysosomal breakdown of photoreceptor outer segments, has innate fluorescent properties, which can be detected by fundus autofluorescence (FAF)

Dry AMD Clinical Development

- Genetic, biomarker and preclinical data demonstrate the potential of σ -2 modulation to improve outcomes in GA associated with dry AMD
- GA is a large unmet medical need where recent successes have demonstrated a clear and objective path to regulatory approval
- Coming soon: a phase 2 clinical trial

Phase 2 will Assess CT1812 in GA Secondary to Dry AMD
